Safe-T-Feed™

Dripless Liquid Dispensing System

The ultimate in safety dispensing for drums! No product loss or drips!

Both the drum device and female tube adaptor have spring-loaded check valves. Just remove the protective cap, unscrew the white cover and one turn of the tube adaptor secures your pump tubing to the drum suction tube. When the devices are disengaged, the spring check valves automatically close. This device is also self-venting.

There are two styles from which to choose:

- 1) The **orange** 'S' – Standard model has an internal 1/4" suction tube for low to moderate flows (less than 1 quart/minute). (Pictured above right.)
- 2) The **white** 'M' – Medium flow model has an internal 3/8" suction tube that has a larger flow capacity of approximately 2-3 gallons/minute.

The female adaptor remains at the site and is reusable due to its rugged Kynar construction.

Participation in the program costs only a \$10 flat fee, which covers the cost of installing one Safe-T-Feed™ kit into one drum. Each kit includes a buttress, cap and insert (either white or orange). Additional parts may be ordered as needed. Part numbers and prices are listed below.

	<u>PART#</u>	<u>DESCRIPTION</u>	<u>PRICE</u>
	D-17000.01	STD-Flo Orange Cap, Female, 90°, 1/4"	\$10.00
	D-17000.03	MED-Flo White Cap, Female, 90°, 3/8"	\$10.00
