

Safe-T-Feed™

Dripless Liquid Dispensing System

The ***Ultimate in Safety*** dispensing for totes!
No product exposure, odor or safety issues!

Experience the ultimate in safe dispensing from totes with our simple-to-use Safe-T-Feed™ system. No need to worry about product exposure because both the tote male fitting device and feed line female fitting have integral spring-loaded check valves for dripless engage and disengage operations.

Simply press the thumb-release spring on the female adaptor and push onto the tote's male fitting and you are done! The venting device on the opposite side of the tote will allow the tote to vent accommodating any discharge rate without collapsing the tote.

The standard dispensing device includes a 3/8" stainless tube that goes all the way to the lowest portion of the tote. High removal rates (higher than 2-3 gallons/minute) may require larger suction fittings that are available upon request.

We are committed to your safety. These devices are available only on our heavy-duty returnable-quality totes.

To use the Safe-T-Feed™ system, just purchase a female shut-off valve, which has an infinite lifetime due to its durable construction. Part number and price are listed below.
